News from the Fence

Call for Bachelor-Level Sch. Scholarships

The 10th President of Carnegie Mellon University, Farnam Jahanian, has announced that the university will launch a new initiative designed to attract and retain top undergraduate students. The initiative will include increased funding for scholarships, new academic programs, and enhanced student services. The announcement comes as part of a broader campaign to increase the number of minority students at the university.

Also, the university is seeking applications for undergraduate scholarships, which will support students who demonstrate exceptional academic achievement and financial need. The deadline for applications is March 1, 2019. More information about the scholarships and application process can be found on the university's website.

Departmental News

The development and impact of robots "made in Portugal." The two robots developed under CMU Portugal support elderly people during their daily activities. 

The associated Departments, for the past six years Carnegie Mellon University has appointed (Augmented Human Assistance) ERI; Portugal."

A team of researchers from the Electronic tattoos used in Health monitoring are being developed under the Stretchtonics project at Carnegie Mellon University's College of Engineering.

The objective of the new logotype is to highlight the researchers'.

"A Pixel-wise Distance Regression Approach for Joint Retinal Optical Disc and Fovea Detection" Deep Convolutional Artery/Vein Classification of Retinal Vessels.

Deep Convolutional Artery/Vein Classification of Retinal Vessels.

Creation of Retinal Mosaics for Diabetic Retinopathy Screening: A Comparative Study

A Pixel-wise Distance Regression Approach for Joint Retinal Optical Disc and Fovea Detection

Deep Convolutional Artery/Vein Classification of Retinal Vessels

Production of Tubular Vessels in Rat Retina Using a Simple, Low Cost, Rapid and Efficient Method to Produce Electronic Tattoos Using an Inkjet Printer.
